- Make a github to document agenda + meeting minutes
  - Github desktop (covered in modules) → set up repository
- Start making meeting agendas for future meetings

Ideas:
- Look at Colombia paper by Melissa for full predictors
  - Diff types of nutrients
  - Could potentially find a paper for traditional Colombian diet
- Parkinson dataset:

Action items for next meeting:
- Make a GitHub repository
- Finalize the idea
- Find any potential Colombia microbiome papers to combine and send to Chris by Friday
- Plan out agenda for next meeting

1. What is the correlation between BMI and microbiome diversity?
2. What is the correlation between BMI and cardiometabolic status?

3. What is the correlation between body fat % and microbiome diversity?
4. What is the correlation between body fat % and cardiometabolic status?

Main question: Which is a better predictor of microbiome diversity and cardiometabolic status? BMI or body fat %?
